DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-11, 13-32 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Mahurkar USPN 5,374,245. Mahurkar teaches a triple lumen catheter that is used for dialysis system (pump). A connector portion 354 connects to the catheter and has indicators near where the catheter is joined. The examiner sees no reason why the entire catheter up to the connector, cannot be positioned entirely within the blood vessel (including the third lumen). The catheter may have a bend shape in it (j-tip) figure 50. The various lumens are in "communication" with all vessels of the body. Applicant's statements of intended use do not distinguish over Mahurkar. Applicant would do well to claim structural differences rather than intended use differences. While Mahurkar shows the triple lumen embodiment with a single end, other embodiments show multiple external ends and one

reading the reference would conclude that such could be applied to the triple lumen embodiment. The multiple aperture on the lumens are also capable of providing a passive bypass lumen means, allowing blood into one aperture and out the other.

Claims 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over Mahurkar USPN 5,374,245. To have included radiopaque markers on the Mahurkar device so as to enable visualization of placement in the body would have been an obvious and notoriously well known modification.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark W. Bockelman whose telephone number is (571) 272-4941. The examiner can normally be reached on Monday - Friday 10:00 to 6:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Angela Sykes can be reached on (571) 272 -4955. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
